

**ABBREVIATED RESETTLEMENT ACTION PLAN**  
**MELTEM ENERJİ ELEKTRİK ÜRETİM A.Ş.**

<b>1. Information About Project</b>	
Name & Location of Sub-project	EGE WPP is located in Kemalpaşa district of İzmir province.
Project Sponsor	MELTEM ENERJİ ELEKTRİK ÜRETİM A.Ş.
Project Cost	17.470.000.- EUR
Installed Generation Capacity	4 x2,3 MW Total:9,2 MW
Key Dates of Implementation	Totally 8.310,7 ha forest area was used by MELTEM ENERJİ ELEKTRİK ÜRETİM A.Ş. The delivery date of compensations paid for the lands which are used for the WPP is 2014.
Project Components & Land Requirements	<ul style="list-style-type: none"> <li>• <i>Access road, including improvements to existing roads (km&amp;ha): Transportation will be provided by existing roads and 6 km access road will be opened in addition.</i></li> <li>• <i>Transmission line corridor (km):6 km</i></li> <li>• <i>Temporary sites needed for equipment parks, lay-down areas, etc:</i></li> <li>• <i>Site plan, including associated facilities: Can be found on attachment.</i></li> </ul>

<b>2. Inventory of Land &amp; Assets Acquired from Private Owners (Completely Volunteer Purchased)(*)</b>	
Name of Owners/land user	The information about the names of the land owners amount of total and acquired areas, existing structures on the land if any and purchasing purpose of the land is given on MELTEM ENERJİ Land Acquisition Table. The payments written on the table was the rental fees for two years, paid for the pole areas. The compensations haven't been determined yet by TEDAŞ. The information on the payments and land owners will be given after the expropriation process is completed.
Project Component: Area(s) / plots(s) acquired (ha)	
Owner's/user's total land holding (ha); % taken for project.	
Land use: pasture, agriculture, residence, etc.	
Inventory of any structures or other fixed or productive assets (wells, fences, trees, field crops, etc) affected.	

Indicate if land was rented or informally used by another party.	
Indicate if non-owner users had assets, trees, crops, etc affected	
Indicate if land-based activity is primary source of income for owner or land user.	
Compensation paid.	
Dates delivered.	
Impact on income of owner.	

<b>2.1. Inventory of Land &amp; Assets Acquired from Private Owners</b>	
Name of Owners/land user	
Project Component: Area(s) / plots(s) acquired (ha)	
Owner's/user's total land holding (ha); % taken for project.	
Land use: pasture, agriculture, residence, etc.	
Inventory of any structures or other fixed or productive assets (wells, fences, trees, field crops, etc) affected.	
Indicate if land was rented or informally used by another party.	
Indicate if non-owner users had assets, trees, crops, etc affected	
Indicate if land-based activity is primary source of income for owner or land user.	
Compensation paid.	
Dates delivered.	
Impact on income of owner.	

<b>3. Inventory of Public, Community, or State Land Acquired</b>	
Land parcels / plots acquired (ha).	Forest area: 8.310,7 ha Total Area: 8.310,7 ha Details are given on <b>Annex 3-4</b> on MELTEM ENERJİ ELEKTRİK ÜRETİM A.Ş. Land Acquisition Table.
Land type / land use: Forest, commons for grazing, other.	These lands are industrial forestry.
Ownership: State, community, other. Structures or other fixed assets.	Treasury.

	There aren't any structures or fixed assets for public use.
Compensation, land transfer, or other measures to mitigate impacts on land users. Specify measures and dates of delivery.	130.970,31 TL was paid in 2014 for the land permit fee.

#### **4.Consultations, Communications & Management of Grievances and Implementation Issues**

##### **-General Information About Project and Project Area :**

Meltem Enerji Elektrik Üretim A.Ş. (Meltem Enerji) has planned to develop and operate Ege Wind Farm (WF) in Kemalpaşa District of İzmir Province in Turkey. The project is located in 11 km southeast of Kemalpaşa District and at a distance of 30 km from İzmir Province. The closest settlement to the Project site is Çambel Village in north with a distance of 1600 m.

Ege WF is located within forest area land owned by the Treasury. Meltem Enerji has secured an official letter numbered 87147206-255.99/1050828 and dated May 20, 2015 from Kemalpaşa Forest Sub-District of General Directorate of Forestry that the forest land within Kemalpaşa Forest Sub-District boundaries is a planted and managed forest, and not a natural forest. There is no privately-owned land situated on the Project site, also there are archaeological and historical resources within the proposed Project site.

##### **-Consultations, Communications & Management of Grievances:**

The company organized a Stakeholder Consultation Meeting on 29.03.2012 at Pazaryeri Tea House, near Çambel Village, Kemalpaşa District, İzmir Province at 13:30. 18 external stakeholders (ministries, provincial directorates, NGOs and chambers) were invited to the meeting as well as villagers. Emphasis was given to the locals specifically from the nearby Çambel Village, which is the closest residential area.

Female attendance was specifically emphasized and encouraged both by the Project Participant and the Muhtar of Çambel Village. Generally the preferred means for invitation was through e-mails. Most of the stakeholders were invited through emails and phone calls. However taking into account that reaching all of the locals through e-mails is not possible, village muhtar was asked to inform the locals and inform them about the project and the meeting (the hard copies of the non-technical description of the project activity, questionnaire on sustainable development matrix and monitoring were also delivered to the locals on beforehand). The invitation text was also put up on several public locations of the village such as the teahouses, markets and mosques.

The meeting date, time and place were defined by consulting to the village Muhtar to enable a high level of participation. Based on the feedback from Muhtar it was decided to organize the meeting at the central teahouse in the village

The meeting was also announced at Yeni Asir Gazetesi local newspaper on 15.03.2012.

Before the meeting the following documents have been provided to the stakeholders:

- + Non-technical description of the project activity (also submitted along with the invitations);
- + Meeting evaluation forms;
- + Questionnaire regarding the sustainable development indicators and monitoring of the indicator (also submitted along with the invitations).

The participation to the meeting was high with over 40 participants. However the female participation was under the expectations and therefore the project representatives conducted one on one interviews with the females of the village, who were willing to provide input.

In total 40 people filled the participation list with 31 male and 9 females. The majority of the participation is locals from Çambel Village. The actual participation was observed to be higher since some of the participants were reluctant to fill the participation list.

The meeting started with introduction of the representatives of the Project Participant Ms. Sila Kılıç, explaining the aim of the meeting. Also a brief explanation was made with regards to the documents provided before the start of the meeting. The introduction followed by the explanation of the project activity done by Ms. Sezen Fidan, followed by a question and answer session. The blind assessment was conducted parallel to the Q&A session. There were no concerns on the impact of the proposed project activity to sustainable development and environmental. Also the “continuous input mechanism” was explained to the participants. It was decided that the muchtar will be the easiest way to communicate throughout the crediting period.

The feedbacks provided by the stakeholders could be summarized as follows:

- The stakeholders are in favor of the project activity mostly due to the fact that it is a renewable energy source and would not lead to any emissions.
- The project activity includes the installation of four wind turbines. Actually the number of turbines were considered to be low in quantity by the locals since it has been the common belief that the area provides a greater potential to even support higher capacities.
- The locals are expecting the project activity will create an employment opportunity to the village.
- The locals are expecting also investments to be done directly to the village. These expectations vary within a wide range from building a wedding hall to providing directly electricity from the wind turbines to the village for free.

In addition to the comments and requests communicated through the forms filled by the stakeholders, Mr. Ahmet Taşan, the Muchtar of the Çambel Village has also provided a written form that summarized the local's positive thoughts on the expected impact of the project activity as well as the needs of the village and the requests from the project owners.

The company has provided a notebook at Çambel village Mukhtar's office for the grievances. There has been no grievances reported until now.
